

SYNERGY FIRE SUIT

ETF2050 ETF2051

HEAT STRESS is the biggest
Danger to Fire Fighters.....

SYNERGY

Is the World's Lightest High Performance
EN 469:2020 Fire Suit, highly breathable,
providing reduced Heat Stress.

$$1 + 1 = 3$$

SYNERGY

Synergy 469 System

Synergy 469 is a multi-functional Fire suit to meet the requirements of Modern-day Fire fighters. Synergy 469 is a stand alone Structural Fire Suit which exceeds the requirement of EN 469:2020 but assembly weighs only 435gm². Studies have shown that for every 100g/m² that is added to a fire suit assembly this results in a 10% additional loading on the heart. Synergy 469 has been designed to reduce the overall weight of the suit by 32% compared to leading assemblies. Synergy 469 is also certified to the latest Wildland And Technical Rescue Standards.

Wildland

The garment dissipates heat quickly. Many brigades use structural kit for this application as budgets do not allow for multiple garments.

Rescue

Protects against blood borne pathogens, water and chemical ingress, can also achieve the requirements of EN 20471 when used with the High Visibility yellow colour in combination.

Station Wear

With our specially designed Station wear conforms to ISO 21942:2019. When worn together the Synergy system provides an enhanced thermal performance whilst retaining the benefits of the world's lightest fire suit conforming to EN469:2020.
